Rotary actuator with emergency function for butterfly valves, AC/DC 24 V, 20 Nm, with two auxiliary switches

Safety notes		
	 The actuator has been designed for use in stationary heating, ventilation and air conditioning systems and is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport. It may only be installed by suitably trained personnel. All applicable legal or institutional installation regulations must be complied with. The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user. The cable must not be removed from the device. The device contains electrical and electronic components and is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed. 	
Product features		
Mode of operation	The actuator moves the butterfly valve to the operating position at the same time as tensioning the return spring. The butterfly valve is turned back to the safety position by spring force if the supply voltage is interrupted.	
Simple direct mounting	Straightforward direct mounting on the butterfly valve with only one screw. The mounting position in relation to the butterfly valve can be selected in 90° steps.	
Manual override	Manual operation of the valve with the hand crank, locking in any position with the interlocking switch. Unlocking is manual or automatic by applying the operating voltage.	
Adjustable angle of rotation	Adjustable angle of rotation with mechanical end stop.	
High operational reliability	The actuator is overload-proof, requires no limit switches and automatically stops when the end stop is reached.	
Flexible signalization	The actuator has one auxiliary switch with a fixed setting and one adjustable auxiliary switch. They permit a 10% or 11 100% angle of rotation to be signalled.	
Combination valve actuators	Refer to the valve documentation for suitable valves, their permitted media temperatures and closing pressures.
