

- Characterised control valve (CCV)**  
with adjustable flow rate,  
sensor-operated flow control  
and monitoring of power and energy
- For closed cold and warm water systems
  - For modulating water-side control of air purification and heating systems
  - Nominal voltage AC/DC 24V
  - Communication via MP-Bus

### About this Document

- The device supports the MP Data-Pool functional profile. All available data points are managed in a data pool and accessible with MP read/write commands.
- This document describes all public data pool values of the device. It's divided into process values and configuration values.
- The MP Data-Pool functional profile is specified in the MP Cooperation Documentation. The document is provided to Belimo MP-Partners.
- See the technical datasheet T5-P6..W..EV-BAC for technical information about the device itself.

### Data-Pool Values

|                | ID | Name       | Description  | Size | Access |
|----------------|----|------------|--|------|--------|
| <b>Process</b> | 11 | -          |  |      |        |
|                | 12 | ErrorState | Error status of the device<br><br>Bit 0: temperature sensor T1 error<br>Bit 1: temperature sensor T2 error<br>Bit 2: flow sensor error<br>Bit 3: mechanical overload | 2    | R      |
|                | 13 | -          | The flag is reset automatically, if the error condition disappears.  |      |        |
|                | 20 | SpRel      | Relative Setpoint in %<br><br>Datatype: uint16<br>Unit: 0.01 %<br>Range: 0 ... 10'000 (0 ... 100 %)  | 2    | R/W    |
|                | 21 | Override   | Control<br><br>Range: 1=Auto<br>2=Close<br>3=Open<br>4=Vnom<br>5=Vmax<br>5=Stop  | 1    | R/W    |
|                | 22 | RelPos     | Relative Position in %<br><br>Datatype: uint16<br>Unit: 0.01 %<br>Range: 0 ... 10'000 (0 ... 100 %)  | 2    | R      |

## Data-Pool Values

|                      |                   |   |   |     |
|----------------------|-------------------|---|---|-----|
| 23                   | AbsPos            | Absolute Position in °                    | 2 | R   |

**Application Remarks****Working with temperature values**

The devices provides the actual values for the remote temperature T1 and the delta temperature Delta\_T. The temperature value measured local to the valve is not provided but can be easily calculated ( $T2 = T1 + \Delta_T$ ).

**Implementation Remarks**

**Identification** The connected type can be identified by its series number:

| Prefix | Profile Type | Profile Category | Type          |
|--------|--------------|------------------|---------------|
| 2      | 1            | 22               | P6..W..EV-BAC |

**Configuration** Configuration data are password protected.

The default password is '0000'.

**Timing of MP-Bus queries**

Master implementations typically poll the slaves in cycles (MP1, MP2, MP3, ...). Reading all data pool values of this node in one cycle is not recommended, because it would reduce the overall MP-Bus performance.

Recommendation:

- Split up the queries into several cycles (e.g. 3 queries per cycle).
- Adjust repetition rates (reading values) according to the rate of change of the value
- Prevent from reading unused data pool values
